INTRODUCTION

Before using the light, be sure to thoroughly read this instruction manual and accompanying “Lithium-ion Batteries”.

Thank you for purchasing our CATEYE “SUMO2 HL-EL920RC”.

This product has significantly increased light intensity more than the conventional products using LED as its light source. It uses high-capacity lithium-ion rechargeable batteries, and is an ideal high-power rechargeable light that delivers superior performance even in a severe environment.

FOR SAFE OPERATION

Do not use it on public roads. This product emits light equivalent to that of automobile headlights, therefore, it is very dangerous depending on the beam angle. When you use it on public roads out of necessity, be sure to adjust the beam angle downward so it does not dazzle the oncoming driver.

- Never short-circuit the terminals of the battery unit or the battery charger. It may cause the unit to overheat, resulting in fire or damage to the component.
- The battery unit uses lithium batteries. If liquid leaks from the batteries, do not touch them with bare hands and do not bring them close to fire.
- Securely connect the plug and fasten the strap. Otherwise, they may come off while riding, causing the light to turn off, or you could topple over if the cable gets caught in the wheel.
- Never use damaged components (e.g., cables, etc.). Send any damaged components to our customer service department for repair.
- Do not stare at the light when it is on. Doing so may damage your eyesight.
- The light unit is hot when it is on or immediately after it is turned off; therefore, be careful not to burn yourself.
- Do not place it within children’s reach.
- Never disassemble the light unit, battery unit, or battery charger.
- Do not store the battery unit in a car or near a heater. Charging, discharging and storing at high temperature may accelerate battery deterioration.
- When you leave the battery unit for a long time, it may self-discharge over time, depleting its voltage. Store the battery unit with the plug disconnected, and charge it before use.
- If you are not going to use the battery unit for a long time, use up the batteries and store them in a cool and dry place. Charge the batteries for about 5 minutes every 6 months.
- If the lamp body or parts become dirty with mud, etc., clean with a soft cloth which is moistened with mild soap. Never apply paint thinner, benzine or alcohol; damage will result.
- When the connecting plug is dirty with mud, etc., clean it with the plug connected and locked.
- This product is water-resistant under normal daily use and can be used in the rain. However, do not intentionally submerge it in water.
- We recommend carrying a flashlight or spare battery unit with you in case the main battery dies.
- Mount the light unit and the battery unit, 3cm and 10cm away from the wire harness. When they are too close to the computer, its transmitting and receiving functions may be affected.

Before Initial Use

The battery is shipped with a small charge, that is used to test the unit at the factory. It is necessary to charge the battery before initial use. (Refer to the “How to charge battery unit” section in this manual.)

MOUNTING THE LIGHT UNIT ON A HELMET

1. Installing the helmet mount, and attaching/removing the light unit
   1. Put the bracket strap through the air vent on the helmet, and secure it firmly.
   2. Install the light unit to the helmet mount.
   * Insert the light unit to the helmet mount until it clicks, and adjust the beam angle.
   * To remove the light unit, pull it out forward while pressing the button.
   CAUTION!: Make sure the light unit is cool before attaching/removing it.

2. Connecting the cable
   Connect the extension cable between the light unit and the battery unit as shown.
   CAUTION!: The plug is locked by turning the ring while pressing. It must remain locked in use.
   * To disconnect the plug, turn the ring in the reverse direction to unlock the plug, and then pull out the plug.

How to carry the battery unit

Carry the battery unit in a pocket or bag, with the rubber pad removed. Check the battery unit to see if the cable is connected properly.

HOW TO MOUNT TO A BICYCLE

1. Installing the bracket, and attaching/removing the light unit
   1. Wind the bracket strap around the handlebar, and put the strap through the opening.
   2. Screw the dial into the bracket to secure it temporarily.
   * Insert the light unit to the bracket until it clicks, and then adjust the beam angle (refer to “How to adjust beam angle”).
   * Securely tighten the dial, and cut off any excess bracket strap.
   * To remove the light unit, pull it out forward while pressing the button.
   CAUTION!: Be sure to tighten the dial by hand. When you tighten it too hard with a tool, the screw thread may be stripped.
   * Check the dial and screw (*) on the bracket periodically, and use them without any loosening.
   * Round off the cut edge of the bracket strap to prevent injury.
   * Make sure the light unit is cool before attaching/removing it.

2. Connecting the cable
   Connect the plug of the light unit to the battery unit as shown.
   CAUTION!: The plug is locked by turning the ring while pressing. It must remain locked in use.
   * To disconnect the plug, turn the ring in the reverse direction to unlock the plug, and then pull out the plug.

3. Installing the battery unit and securing the cable
   1. Put the fixing strap through the strap holder of the battery unit.
   2. Install the fixing strap so that the turnback strap faces outside.
   3. Secure the strap holder of the battery unit with the turnback strap of the fixing strap.
   4. Put the rubber pad of the battery unit on the top tube, and secure it firmly by wrapping with the fixing strap.
   5. Put the auxiliary strap through the strap holder of the battery unit, and secure it firmly by winding it around the down tube.
   6. Wind the auxiliary strap with the battery unit installed as frontward as possible. The battery unit will be stably secured during riding.
   7. Secure the cable appropriately to the frame and/or stem with another auxiliary strap.
   8. The turnback strap of the fixing strap can be also used for securing the cable.
   * When the battery unit is not installed directly to the frame, the rubber pad of a battery unit can be removed.
   CAUTION!: Be sure to firmly secure the battery unit. When the battery unit is secured insufficiently, it may be dislocated on impact while riding.
   * When some cables are installed along the top tube, attach the cable cover in advance to protect the cable from any force applied. Otherwise, it may cause trouble in braking or gear shifting.
   * Pay attention to the arrangement of the cable so that it does not interfere with the handling of the bicycle. Do not secure the cable at an acute angle because the wire inside the cable may break.
   * Adjust the bracket angle before using according to the description in “How to adjust beam angle”.

4. How to Adjust Beam Angle

Warning!!!: Do not use this unit on public roads.

Turn on the light in a level place at night, and adjust the beam angle to avoid dazzling any oncoming driver. To attach to your bicycle, slightly loosen the dial of the bracket, and adjust the vertical angle of the light unit. Securely tighten the dial after adjusting the strap.
* Loosen the dial just enough to allow the bracket to move slightly.
* Do not loosen the dial too much, or the bracket strap may come off.
* It can be adjusted by 10 degrees horizontally.

4
**HOW TO USE**

(A) **Switch operation (switching the lighting mode)**

Use the switch of the light unit to turn on/off and to switch the lighting mode.

*Press and hold* the switch to turn on/off the power (light on/off). The flash mode can be triggered even with the light turned off.

<table>
<thead>
<tr>
<th>Switching operation</th>
<th>Dynamic mode</th>
<th>Express mode</th>
<th>Mode indicator</th>
<th>Operating time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press</td>
<td>Dynamic</td>
<td>Green</td>
<td>Orange</td>
<td>Approx. 2 hours</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>All night</td>
<td>Approx. 4 hours</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Red</td>
<td>Approx. 6 hours</td>
</tr>
<tr>
<td>Quick double press</td>
<td>Flash</td>
<td>None</td>
<td></td>
<td>Approx. 35 hours</td>
</tr>
</tbody>
</table>

* Mode indicator : Immediately after switching the lighting mode, the switch flashes for 5 seconds and indicates the current lighting mode.

* Mode memory function (2) : The light unit turns on at the previous mode.

**Temperature control**

When the light unit becomes hot while it is turned on in the dynamic mode, the protection function switches automatically to the normal mode. In such a case, it returns to the previous dynamic mode when the light unit becomes cooler by air-cooling effects, etc.

* When the light unit increases in temperature abnormally, its safety function becomes active and turns off the light. When it decreases in temperature, it can be turned on again by switch operation. It is recommended to use in the All night mode when there is no wind, e.g., when you are not riding.

**Remaining battery level**

When the light unit is on, the color of the switch shows how much battery power remains.

<table>
<thead>
<tr>
<th>Guideline for the battery indicator</th>
<th>Standard charging time</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Green light</strong> : The remaining battery level is sufficient.</td>
<td>Approx. 5 hours (Optional BA-908: Approx. 10 hours)</td>
</tr>
<tr>
<td><strong>Orange light</strong> : The remaining battery level is low. Charge the battery unit.</td>
<td></td>
</tr>
<tr>
<td><strong>Red light</strong> : Stop using the light unit, and charge the battery unit.</td>
<td></td>
</tr>
</tbody>
</table>

* The indicator is only an estimation of the remaining battery run-time, and varies with the environment or conditions of use.

* Make it a habit to charge the battery unit when the indicator changes to orange.

**Low battery charge warning function**

To prevent the light unit from being turned off unexpectedly due to low battery charge, this function turns on the indicator red, and switches the lighting mode from normal lighting to intermittent flashing.

(B) **How to Charge Battery unit**

**Important!**

* If the battery unit is wet, wipe dry with a dry cloth before charging the batteries.

* Be sure to use only the supplied battery charger (applicable to 100 - 240 volts). The battery charger is indoor use only.

* When the charging indicator of the battery charger flashes green, there may be a circuit failure. Unplug the charger and remove the cause.

* When the charging indicator of the battery charger flashes green quickly within a few minutes after charging starts, unplug the charger from the outlet, and charge the battery according to the procedure.

**Similar behavior may be seen when the battery is not immediately after use. Charge the battery unit after cooling it sufficiently.**

**When the same results occur repeatedly, the battery may be deteriorated.**

* When the battery unit repeatedly does not meet the proper operating time even though it is fully charged, it might be at the end of its operating life. Replace the old battery unit with a new one.

* Lithium-ion rechargeable batteries are recyclable. Remove the used batteries from the battery unit, apply insulating tape on the plug, and take them to stores supporting rechargeable battery recycling (refer to “How to disassemble the battery unit (for disposal)”).

* The battery charger can be checked with the charging indicator of the battery charger.

**Charge the battery unit with the following procedure.**

1. Plug the battery charger to an AC outlet.
2. Connect the plug of the battery charger to the plug of the battery unit.
3. Charge the batteries with the plug locked.
4. After charging is complete, make sure to unplug the charger from the AC outlet.

<table>
<thead>
<tr>
<th>Charging indicator state</th>
<th>Standard charging time</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Red light</strong> : Charging</td>
<td>Approx. 5 hours</td>
</tr>
<tr>
<td>Flashing red light / Flashing green light : Charge error</td>
<td></td>
</tr>
</tbody>
</table>

* The standard charging time and run time are guideline values and depend on the operating environment.

* The supplied BA-904 battery unit (4600 mAh) is charged with about 80% of its capacity in 2.5 hours after charging starts.

* Directly connect the battery unit to the battery charger to charge, without using the extension cable. Doing so may extend the charging time.

**LIMITED WARRANTY**

2-year Warranty: Light unit / Battery unit /Battery charger (Deterioration of the battery is excluded.)

CatEye products are warranted to be free of defects from materials and workmanship for a period of 2 years from original purchase. If the product fails to work during normal use, CatEye will repair or replace the defect at no charge. Service must be performed by CatEye or an authorized retailer.

To return the product, pack it carefully and enclose the warranty certificate (proof of purchase) with instruction for repair. Please write or type your name and address clearly on the warranty certificate. Insurance, handling and transportation charges to CatEye shall be borne by person desiring service. For UK and REPUBLIC OF IRELAND consumers, please return to the place of purchase. This does not affect your statutory rights.
